Grease Trap Condition Explanations

OK--Some Floating grease, water in trap easily visible without disturbing surface.

MOD--A crust of grease or oil, water visible with only slight stir of stick.

HVY--A heavy crust of grease or oil, but water visible after penetration. (A heavy crust does not mean trap needs pumping as water capacity on trap may be adequate in deep trap.)

VHVV--Same as above only crust is very thick and solid.

NTP--Need to pump! Heavy crust or layer of oil and no water visible upon aggressive agitation with stick. Generally, a visit is made at this time to the manager/owner giving them 5-day notice to rectify the situation.

A combination of any of the first four means trap condition fall between these categories with the most prominent first. (i.e. OK/MOD is better than MOD/OK.)

P - Pass

F - Fail

Frequency 1 / month.
